**431 CLING-ON JR.™**

**Progressive Lens Protection Tape**

---

**DESCRIPTION:** **CLING-ON's** are a patented progressive lens protections tape, designed to mask off all progressive factory markings before blocking tape application.

**CLING-ON's** are a factory die cut protection tape supplied with their own dispensing carton, providing economy, efficiency and a patent pending protection system designed to eliminate the time and additional expensive to remark progressive lenses.

**CLING-ON's** are available in two sizes. (1,000 per roll)  
#430-F466 Cling-On (large) - 2.438" x 1.665"  
#431-T053 Cling-On (Jr.) - 1.825" x 1.675"

**APPLICATIONS:** After Rx and prism axis layout, place a **CLING-ON** over the progressive factory markings. Tape, block, surface, polish, and deblock as usual. **CLING-ON's** will peel away with the blocking tape, leaving factory marking intact, and lens ready for edging.
